08/08/2016: DISCA and ATVI Report the Revenue Gains Previously Detected in "Big Data" Metrics

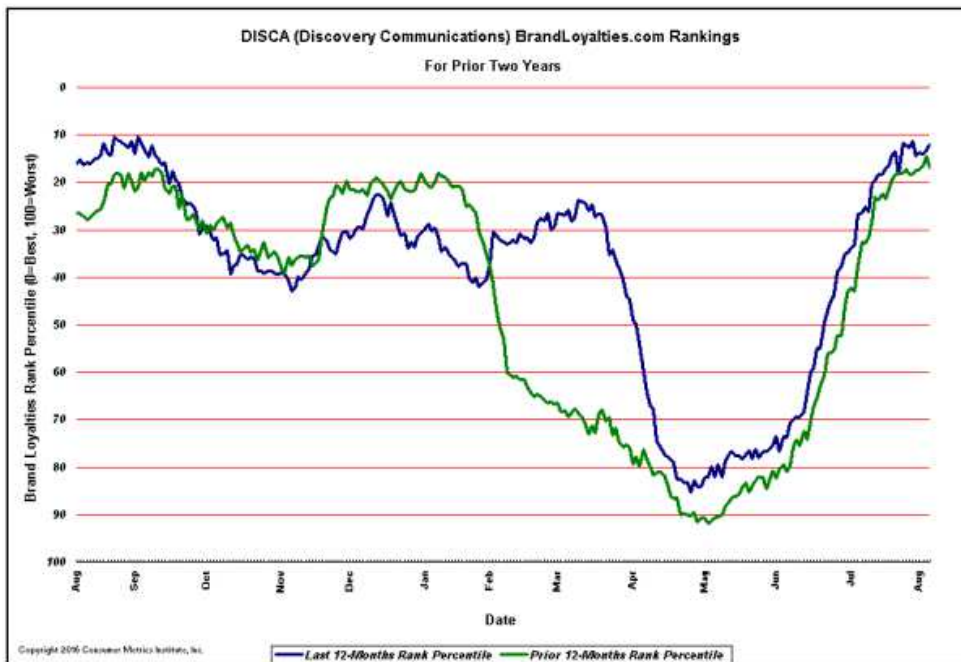

(Web page version is [here](#))

You may recall that in our July 28th edition of the BrandLoyalties Spotlight we demonstrated how our proprietary metrics (using online consumer interest) signaled positive results for SFLY ahead of Earnings. We also hinted that our metrics for DISCA and ATVI were strong. As anticipated, the financial results for these two companies as reported last week were consistent with our forward-looking metrics.

Below are the supporting data/charts which led us to feature these equities and which our clients use everyday to help them to more accurately anticipate possible earnings surprises:

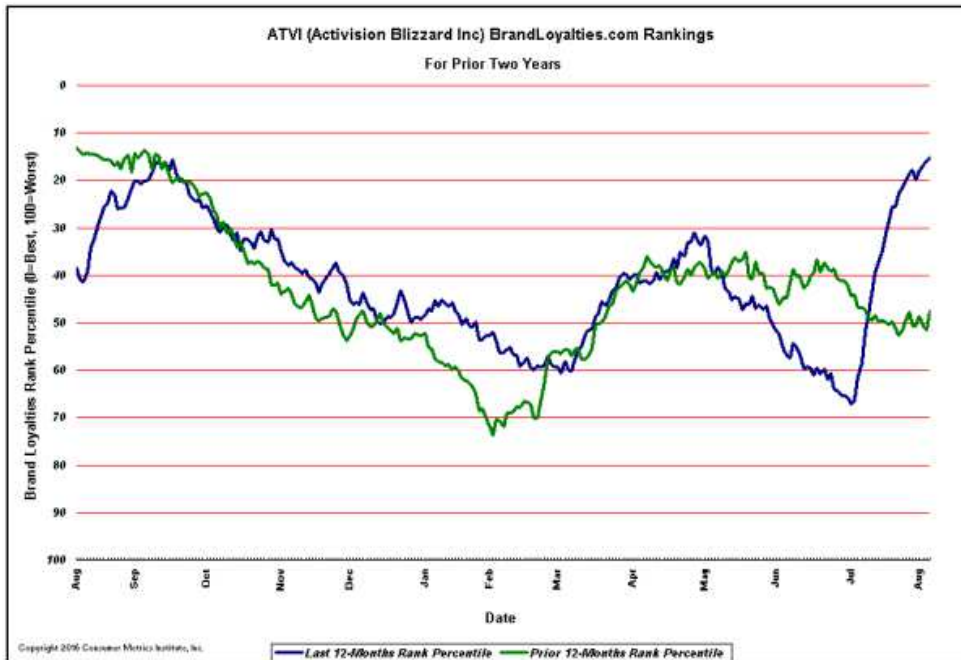

DISCA (Discovery Communications, Inc.)

(Click [here](#) for best resolution)

On August 2, 2016 Discovery Communications, Inc. reported revenues of \$1,708 million, an increase of 3% compared to the prior year that included 7.2% growth at U.S. Networks. In the U.S., distribution revenue rose 8.1% to \$386 million.

ATVI (Activision Blizzard, Inc.)

(Click [here](#) for best resolution)

And on August 4, 2016 Activision Blizzard, Inc. reported net revenues presented in accordance with Generally Accepted Accounting Principles (GAAP) that were a Q2 record \$1.57 billion, as compared with \$1.04 billion for the second quarter of 2015 -- an increase of 50%.

The above charts plot the daily "Big Data" brand name citation share growth for Discovery Communications, Inc. (DISCA) and Activision Blizzard, Inc. (ATVI) for the past 24 months, with the earlier 12 months in green and the latest 12 months in dark blue.

Obviously, revenue changes can be either positive or negative. With "earnings season" hard upon us, it might be good to have an idea of which direction some of your key equities are heading.

Note: a pro forma portfolio consisting of the top 20% of all ranked equities in the BrandLoyalties universe, from 1-1-08 to 12-30-15, had an annualized total return of 24.80% compared to 13.36% for the Consumer Discretionary Index, and 6.51% for the S&P500.

How Does BrandLoyalties.com Track and Rank Brand Loyalties?

Savvy investors have always been interested in gauging consumer loyalties. Traditionally, consumer surveys, focus groups and even retail traffic counters have been deployed to understand whether certain stores, brands and products may be gaining or losing market share. Perhaps most famously, Peter Lynch became an investing legend while managing Fidelity's Magellan fund, by maintaining an awareness of consumer preferences. Today, BrandLoyalties.com synthesizes over one hundred million online consumer citations every day to offer investors "Big Data" metrics for over 1,200 U.S. listed equities (plus another 350 Asian equities). These leading indicators are derived systematically from online consumer activity and may provide guidance and trend information ahead of quarterly earnings reports.

In the largest and timeliest "focus group" ever assembled, each and every day hundreds of millions of people disclose exactly what products they like and which they avoid. They do so mostly unconsciously, by leaving behind on-line digital clues that define their preferences as consumers. The challenge is extracting these brand loyalty declarations from the eight *zettabytes* of on-line cat videos and other digital debris. But when done right, resourceful portfolio managers can deduce the level of consumer activity at the leading edge of corporate revenue streams -- capturing shifting brand loyalties before even "corporate insiders" fully grasp how their own customers are behaving.

The fundamental new corporate metrics available from "Big Data" derive from on-line consumer citations of the brand names owned by those corporations. Year-over-year changes in brand name citation rates, the current quarter's citation growth rates, and relative citation "share" are becoming the key anticipatory metrics for upcoming corporate revenues.

These new fundamentals are currently being used by major hedge funds and institutional investors. And "Big Data" has recently become the summer's hot topic in the [Journal of Index Investing](#). The reason is simple: roughly 40% of the Russell 3000 have strong and persistent correlations between citation share growth and revenue growth.

"Big Data" is big in the sense that it comprises the billions of daily on-line product searches, coupon queries, price comparisons, posts at product review forums, store location or hours queries, auction site activity, restaurant reservations, mobile app inquiries ("Siri, where is the nearest Starbucks?"), Facebook "likes" and "unlikes" or simple tweets (#LoveMyTesla). "Unfortunately, the infrastructure, technical resources and specialized knowledge necessary to quickly make sense of such vast amounts of data is often beyond the scope of existing in-house researchers at most asset managers," explains BrandLoyalties.com's Tony Seker. "Yet it is these very same metrics that are now providing a key edge to major hedge funds and institutional portfolio managers. We see it as our job to provide those metrics in a simple and practical form."

The comprehensive suite of metrics at Tony's BrandLoyalties.com includes the real-time rankings of over 1,200 major US equities (plus another 350 Asian corporations) based on the constantly changing rate of on-line brand name citations, changes in the citation "share" of those equities over the trailing quarter, the historic correlation of such citation shares to reported revenues and equity price movements, the consumer's current mood concerning those brand names, investor citation rates and current opinion of those equities, and alerts for sudden changes in citation rates that may signal an unfolding or significant PR event.

Signals derived from BrandLoyalties.com's proprietary metrics can be generated well before earnings announcements and generally before guidance is provided. Each equity exhibits a unique lag time between when a signal is generated from the online data and subsequent price movement in the stock -- a lag time that is dependent on equity-specific details such as fiscal reporting calendars and the length, complexity and inertia of the corporation's product distribution channels. BrandLoyalties.com provides 'best fit' lag times to clients for each security to help portfolio managers optimize the timing of their transactions.

Clients may also choose to opt-in for daily email alerts which highlight the equities exhibiting the most significant changes. While data aware investors are naturally interested in identifying equities with growing real-time brand loyalty, clients may also mitigate risk in existing portfolios by monitoring or avoiding stocks which display fading customer loyalty, rapidly changing opinions or major PR events.
